KR600 NEWSPAPER INSERTING SYSTEM

The all new KR 600 Newspaper Inserting System offers a wide array of features and capabilities that increase reliability and throughput. Utilizing the latest PLC controls and innovative mechanical systems, the KR 600 has all the makings of a high end system.

The KR 600 handles most insert types using a combination of interchangeable rotary and shuttle feeders. Both systems are available with KR's new DFD Drive System. This option provides "on the fly" control of insert delivery resulting in more consistent inserting and higher throughput.

The PLC based control system monitors package integrity and simplifies setup. New features such as pocket priority and backup ensure critical inserts never miss. The KR 600 can also be equipped with a PC interface for zoning applications and is ideally suited for applications that require frequent and rapid changeover.

You can spend a fortune on over-priced, outdated inserting equipment. Kirk Rudy designed the KR 600 so you don't have to. Insert reliability into your operation and save a bundle while you are at it – make your next inserting system a Kirk Rudy.
